Why Ecosure

Industry Leaders

Ecosure is a multi-disciplinary environmental consultancy that leads the industry through innovation and excellence in environmental science. Our approach combines current best practice science and practical field application, with strong client relationships providing exceptional value in service.

Brilliant People

Our strength is our people: we attract and grow the best. Our employees share our bold vision to preserve the world's natural brilliance and strive to deliver their most ground-breaking work as part of the Ecosure team.

Solid History

From its humble beginnings on the Gold Coast more than 25 years ago, Ecosure now boasts a proven track record for excellence; supporting clients; advising government policy makers and delivering long term environmental solutions.

“Our success is a credit to our talented people who don't just work at Ecosure; they are living their passion and purpose.”

Integrated Management Systems

Ecosure has a third party certified Quality, Safety and Environmental management system compliant with ISO 9001 (quality), AS 4801 (OHS) and ISO 14001 (environment) which streamlines business operations to ensure:

- Best practice project management
- Identification and management of risk
- Efficient resourcing and contingency
- Reduction in environmental impact plans
- Superior delivery of client service

Strong Safety Culture

Project specific safety plans which include SOPs and SWMSs enable us to achieve efficient project delivery whilst meeting our “Zero Harm” goal.

Project Achievements

26 Years

leading collaborative programs for **Ibis population management** along the east coast of Australia

Ecological restoration

across more than **250** high conservation value sites supporting a range of terrestrial and marine habitats

915,000 hectares

of local government area mapped for wildlife critical corridors and 240,000 hectares identified as critical corridors for wildlife movement

Installation and establishment of over 300,000 locally sourced tube stock for environmental offsets and ecological restoration programs

30 Government agencies adopting our **highly regarded**, tailored approach to **flying-fox/ community impact mitigation**

In excess of 20% staff >10 years service

Over 600 km of proposed CSG pipeline **easements surveyed** for flora and/or fauna

700 nest boxes installed across NSW and QLD

25 Years of wildlife management at Gold Coast Airport

20,000 native fauna relocated from mining, road and rail, solar and wind farm infrastructure developments

Ecosure supports the energy, resource and infrastructure sectors with integrated services that focus on the delivery of successful projects. Our multi-disciplinary team, technical expertise and extensive experience in environmental legislation allows our clients to identify environmental risks, make informed decisions on investments and achieve best practice outcomes for the environment and the regulators.

Our approach combines current best practice and practical field application, with strong client relationships providing exceptional value in service. Ecosure has extensive experience working with Local, State and Commonwealth governments, Defence, urban developers, town planners, the resource sector and the renewable energy sector.

Feasibility & Due Diligence

Early in the process we evaluate the risks and opportunities associated with potential projects from an environmental and legislative perspective to inform investment decisions

- Preliminary desktop assessment and constraints analysis
- Environmental permits, licenses and approval pathway
- Survey design to support environmental approvals
- Environmental risk analysis
- Third party peer review
- Government and regulator consultation

Impact assessments, planning and approvals

We assess the environmental values and constraints associated with the project site to further refine regulatory requirements and ensure streamlined approvals delivery.

- Flora and fauna surveys, including terrestrial, aquatic and avifauna surveys
- Targeted threatened species surveys
- Vegetation mapping and assessment
- Protected plant surveys and management plans
- BioCondition and habitat quality surveys
- Biodiversity Assessment Method surveys and reporting
- Bird and bat utilisation surveys and analysis
- Pest Animal and weed surveys and management strategies
- GIS based modelling and spatial analysis
- Environmental impact assessment
- Significant and residual impacts assessments and offset requirements
- Referrals under the *Environment Protection and Biodiversity Conservation Act 1999*

Offset planning and management

We evaluate the planning stages of biodiversity offsetting including offset strategy and management plan development to support the approvals process. We can also manage the delivery of the offset site to achieve the required conservation gains.

- Determine approach to project offset requirements with State and Commonwealth agencies.
- Evaluate suitability of candidate offset lands
- Conduct surveys to determine adequacy of proposed offsets
- Prepare offset management plans Deliver offset management and maintenance through pest animal, weed and fire management to meet your offset goals
- Biodiversity Stewardship Agreement surveys and reports
- Offset monitoring and reporting

Construction approval, management and monitoring

We ensure efficient and streamlined compliance from construction into operations through our expertise in construction services.

- Construction environmental management plans
- Compliance monitoring and auditing
- Biosecurity matter management, and pest plant and animal control
- Secondary ecological State approvals, e.g. species management programs, regulated vegetation clearing, waterway barrier works
- Pre-clear surveys and fauna-spotter-catcher services (FSC), including nest box installation
- Dewatering and fish salvage
- Protected plant translocation planning
- Infrastructure Sustainability Council of Australia accredited personnel
- Restoration plantings
- Water quality monitoring, including surface and groundwater
- Vegetation condition and fauna management monitoring and auditing

**Quality is not an act, it's a habit
created every day by our people.**
